## ABSTRACT

A pharmaceutical composition is provided that has a low toxicity, demonstrates superior physicochemical properties and pharmacokinetics, and has superior peripheral blood lymphocyte count lowering activity.

The pharmaceutical composition contains a compound having general formula (I):

[Chemical Formula 1]

$$HO \longrightarrow \mathbb{R}^1$$

$$NH_2 \qquad \mathbb{R}^2 \qquad O$$

$$R^3 \qquad (I)$$

(wherein R¹ represents a methyl group or an ethyl group, R² represents a methyl group or an ethyl group, and R³ represents a phenyl group substituted with 1 to 3 substituents selected from the group consisting of a halogen atom, a lower alkyl group, a cycloalkyl group, a lower alkoxy group, a halogeno lower alkyl group, a lower aliphatic acyl group and a cyano group), a pharmacologically acceptable salt thereof or a pharmacologically acceptable ester thereof.
